Partial Denture Care Instructions

Congratulations on receiving your new partial denture! This custom piece helps to restore missing teeth and give you the confidence to smile and ability to eat your favorite foods.

Take your time settling into your new partial. Like anything new, patience is required when learning to place and remove the partial. Speaking may require a little practice as well, so be sure to get in front of a mirror at home before showing off your partial to the public!

Be sure and stop back by the clinic if you have any sore spots or trouble with your new partial. We are here to help and have built in follow up appointments to ensure your satisfaction.

Please don't wear your partial to sleep in. It was not designed for continuous use and doing so might irritate the gums and contribute to dental decay. Instead, remove the partial, wash with mild soap and water, and leave in your storage box in clean water.

We hope you enjoy your new appliance as much as we enjoyed helping to fabricate it just for you. It is our sincere desire for this new device to perform well for many years and we will work with you to achieve that goal. Thanks for choosing Alexandria Family Dentistry!
